

Assignment 6

Write jupyter notebook scripts for this problem.

This is an open-ended question. You are expected to apply the data mining methods that we have learned this semester and discover information or patterns from a FitBit dataset. The dataset is downloaded from <https://www.kaggle.com/arashnic/fitbit>. On this website, you will see what other people have done to analyze the data. You are expected to be creative and come up with your own unique approaches to analyze the data. You do not have to analyze all of the data files in the dataset.
